1

2

**“This is Zim Olson of Zim Mathematics introducing this presentation explaining the Systems concepts and terms I use throughout my work on zimmathematics.com. Most of my conceptual content of principal and/or partial and/or open domain available express-ability I have derived from my readings of old and/or new testaments of the Bible. “**

3

**“I document that Humanity throughout history / non-history has utilized these concepts in all paradigms, recognized paradigms, knowledge and knowledge paradigms and other wise. I show that every identified and utilized object(s) by man-kind recognizes implicitly and/or explicitly these four behavioral components in Zim Mathematics. Every object such as numeric, qualitative, quantitative, names, physical, genetic, biological, temporal, origins, endings, logical, Mathematics, Scientific, Historical, Theological, philosophical, lawful, moral can be easily documented as utilizing these concepts implicitly or explicitly...**

4

Every identified object(s) can be shown to utilize a Functional Context called **Every(X)**, a functional component called  $f(x)$  or **Any(x)**, A resultant functional intersection **Some(x)**, and a Non-stated functionality **Non(x)**. This can be shown to give a System and/or Sub System express-able function for any identified object and/or object(s). This this may be described as an Earth / m-n kind principal construct, form or image.

This Zim Math paradigm documents contemporary paradigms better than these paradigms can document themselves. All contemporary paradigms can be seen to fall clearly with these Systems express-able outlines I provide in Zim Mathematics...

5

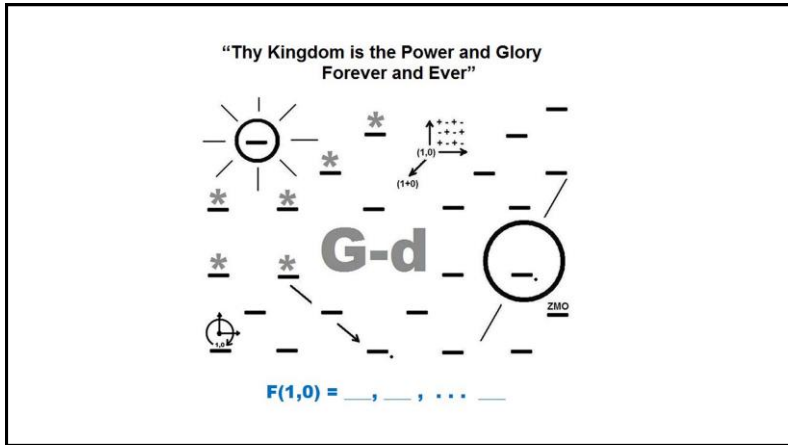

Humanity's access to functionality from an open domain source is shown also. Functional Open Domain development may be provided by object and/or object(s) express-ability combinations and variations. The importance of implied and explicit domains of expression(s) and / or non-expression(s) is explored in Zim Mathematics.

I also hope to demonstrate with Zim Mathematics that Math Art can provide an exceedingly visualized, viable Mathematical Methodology with corresponding logic, where Math Art object(s) are identified in Systems Concepts and Terms."

## Systems and/or Sub Systems as Expressed

A Mathematically Dominant Paradigm

13

The whole concept in Zim Mathematics is **INCREDIBLY** simple. I have shown that every object and/or object(s) is and has been express-able as a "System and/or Sub System". There have been available to Humanity object(s) of principal expression 1, 0, 1 and 0, 1 or 0, 1 and/or 0. There have been also available partial, pseudo, principle express-able object(s). And of course the well known express-able object(s) of an open domain. These variations in express-ability have given rise to all so called knowledge paradigms we currently recognize. This is considered valid in the Bible until 'The End of The Age'. Or as stated in Zim Mathematics, until all object(s) are express-able as principal object(s) 1 and/or 0. The End of Time."

14

**Systems and/or Sub Systems as a Dominant Mathematical Paradigm, where there are **Four Behavioral Components** for any Existential System / Object:**

- Every object has a functional context, **Every(x);**
- A System and no Sub System functionality **Any(x) or f(x);**
- A Non stated functionality, **Non(x);**
- A resultant intersecting functionality, **Some(x).**

15

**I attempt to summarize contemporary** viewpoints of these above stated System concepts here. **Theologies may recognize these principal components.** But they are not deemed as functionally / logically equivalent as well as independent, distinct source. The non stated or open domain is not always recognized as a viable and principal functional source. This makes available no completely principal and/or principle functional equivalency ever and functionality of an open domain is thus not available. The four Principal expressions give our Principal / Principle functionality source for object **and/or** object(s) within all recognized express-able domains.

16

**Science and Earth knowledge paradigms** utilize the system concepts, but entirely on an implicit and / or explicit, selection or omission basis. The functional context and non stated function is deemed as pseudo derivable by any(x) or f(x) . Any relationships of the system concepts some(x) are considered pseudo functionally derivable. Any so called open domain is also considered completely and functionally calculable. Any principal source is given no distinction from any pseudo, partial and principle functional source. Ownership of these domains by these pseudo calculations is generally accepted. Making available only given domains and their pseudo outcomes.

17

**Information Sciences, Economics, Government** also utilize these system concepts thoroughly, but have no sense of an Existential or Principal and / or Pseudo or any explicit basis to them at all.

**Lawfulness + knowledge is mistakenly viewed as the availability** of or our pseudo express-ability within some corresponding availability of a pseudo open domain. Express-able lawfulness is given only with principal express-ability of pseudo/partial and corresponding principal open domain. Available pseudo / partial express-ability gives us a pseudo / partial express-ability domain outcome. Material and/or informational boundaries need not be blurred with Zim Mathematics System Concepts.

18

**Mathematical Origin or derivation of System Components as an Expression Dynamic:**

$f(1) + - / x \Rightarrow f(0) + - / x \Rightarrow f(1+0) + - / x \Rightarrow f(1,0) = + - / x$

$f(1) + - / x = f(0) + - / x = f(1+0) + - / x = f(1,0) = + - / x$

**Giving this next tenet for any object expressed as a principal System and/or expressed Sub System.**

$g(1,0) + - / x \Rightarrow g(1+0) + - / x \Rightarrow g(0) + - / x \Rightarrow g(1) = + - / x$

$g(1,0) + - / x = g(1+0) + - / x = g(0) + - / x = g(1) = + - / x$

19

**Mathematical Origin or derivation of System Components as an Expression Dynamic:**

$f(1) + - / x \Rightarrow f(0) + - / x \Rightarrow f(1+0) + - / x$

$f(1) \Rightarrow$                        $f(0) \Rightarrow$                        $f(1+0) \Rightarrow$

  1                                                                                      X
