Mankind's Quest for Open Domain Dominion & Development.

Functional Open Domain

A Survey...The "Open Domain" has been a target of many of Mankind's endeavors. After a quick survey of some of these efforts and recognized commentary, I came to the conclusion that the reason for the overwhelming dissatisfaction is that there is no such thing as an open domain. ...

2

Functional Open Domain

Mathematics implies a claim to an open domain with axioms of develop-ability and reducibility. Our creative souls attempt sovereignty with sheer creative abilities. Adam from the Bible I guess figured he could create as G-d evidently had and achieve a dominion of an open domain of his own. Jesus of Christianity is accused of assuming open domain ownership, but upon thorough inspection of the Bible He promised Man-kind only access to Principal and Principal Open Domain express-ability. The dominion of expression of expression(s) methodologies on Earth precludes us to this fate and destination.

3

4

This is Zim Olson. "Open Domain Development" is an important aspect to Human Knowledge Development, however it has been easily not fully appreciated or understood. Mathematics and Logical understanding of this domain has been largely inadequate. Express-ability has been our only recognized avenue to open domain development, but has also served equally as our source to Human problems. Principal open domain development I suggest as our viable methodology alternative.

7

Domain Development with Express-ability and Available Object(s) Variations

8

I got the idea for this slide from church, while congregation sang Christian songs. It is not necessary to fathom express-ability or even principal express-ability with such behavior, like the birds singing each morning. Combinations, permutations, of object and /or object(s) variations could easily give us the new and additional express-ability. Computer calculating power could achieve this same thing in seconds.

Systems Math and Objectivity

Scientific Method has relied on Objectivity as a source to so called reproducibility of expression outcomes. This reproducibility did not include a Uni-Version express-ability of all object(s) as system(s). Any so called Scientific reproducibility of outcomes relied on implied system(s) parameterization of any object(s). The so called outcomes and Scientific domains of express-ability and "Reality" interestingly provide only limited and terminal outcomes. Giving an entirely problematic and systemically limited express-ability. Not so helpful in the long run.

10

Systems Math and Objectivity

Self Expression still serves as our primary and principal source to measures of objectivity.
